

CropFin: The Agri-Finance Case Competition

Problem Statement

As a **consultant for an NBFC**, you are tasked with solving a geographical and structural paradox. While institutional credit has surged to ₹25.48 lakh crore, it remains concentrated, with the South receiving 48% of loans while the North-East receives a mere 1%.

Furthermore, you are operating in an environment of increasing climate volatility. Recent heatwaves and erratic rains have caused loan defaults to spike in breadbaskets like Punjab and Haryana. **You must design a lending framework that expands into underpenetrated regions without compromising the NBFC's Asset Quality (targeting an NPA below the sector average of 6.5%).**

Specific Deliverables

1. **Identify two credit-deficient regions** for expansion and justify their selection based on agricultural potential, farmer demographics, and unmet credit demand.
2. Design a **credit assessment and loan product structure** that integrates Kisan Credit Card (KCC) data with climate-risk indicators.
3. Propose an **operational strategy to reduce the cost of servicing small-ticket loans (avg. ₹48,000)** through digital tools, partnerships, or alternative distribution channels.
4. **Explain how your strategy will maintain NPAs below 6.5% while scaling lending in underserved regions.**

Instructions:

1. Teams are required to submit a 3–5 slide presentation, excluding the introduction and thank you slides.
2. The deadline for case submission is 14th March 2026 at 11:59 PM.
3. Submissions will be accepted only in PDF format.
4. The submission file must be named in the following format:
Teamname_Teamleadername_Cropfin.pdf
