

Case Study: InnoSync Technologies — Driving Growth Through Platform Innovation

Background

InnoSync Technologies is a mid-sized Indian B2B SaaS company. It was founded in 2020 and is based in Bengaluru. Its main product, SyncOne, is an integrated platform for operations. It combines project management, resource scheduling, AI-based performance analytics, and automated compliance reporting.

By 2025, more than 500 small and medium-sized enterprises (SMEs) had adopted SyncOne. These businesses were primarily in the IT/ITES, logistics, and manufacturing sectors. The company saw strong early growth and became known as a dependable operations platform for expanding businesses.

The Situation

In early 2025, Ananya joined InnoSync Technologies as a strategy and product lead. She had previous experience in enterprise software. During her onboarding, Ananya carried out a detailed review of the company's performance, customer base, and the competitive landscape. Her analysis revealed several emerging concerns:

- The Indian SME market was showing signs of saturation, limiting further organic growth.
- Monthly growth had declined from 18% to 7% within six months.
- Global SaaS providers were entering the Indian market with bundled enterprise platforms.
- Customer interviews revealed a demand for more industry-specific workflows, particularly in retail and healthcare.
- InnoSync's revenue was heavily concentrated in Indian SMEs, with minimal enterprise or international exposure.

Ananya presented her findings to **Vikram**, the CEO and co-founder of InnoSync. Vikram acknowledged the risks and shared concerns about long-term scalability.

To better understand customer needs, Ananya also spoke with **Meera**, an operations head at a mid-sized retail chain using SyncOne. Meera appreciated the platform's usability but noted that it lacked retail-specific modules such as store-level inventory tracking, seasonal demand planning, and point-of-sale integrations.

These discussions reinforced the view that while SyncOne was a strong general-purpose platform, it lacked the depth required for enterprise and industry-specific adoption.

Strategic Challenge

Based on these insights, InnoSync's leadership defined a new strategic objective:

To reposition InnoSync as a preferred SaaS platform for mid-market enterprises across India and selected international regions within the next 18 months.

However, achieving this goal would require careful decisions about:

- Which markets to enter,
- How the product should evolve,
- How to sell to more complex enterprise customers, and

- ♦ What internal capabilities must be developed.

Recognising the complexity of this transformation, InnoSync invited a team of external strategy consultants to support Ananya and the leadership team in shaping the company's next phase.

Your Role

You are part of the **strategy consulting team** advising InnoSync Technologies.

Your task is to recommend a coherent growth and transformation strategy that enables InnoSync to:

- Expand into new customer segments or geographies,
- Innovate its product offerings for competitive differentiation,
- Design an effective go-to-market and pricing strategy, and
- Build the organisational capabilities required for sustained growth.

Key Questions

1. Growth Strategy

- Which new market or customer segment should InnoSync prioritise?
- Why is this segment attractive in terms of size, growth, and competitive dynamics?

2. Product & Innovation

- Propose three strategic product enhancements or new modules for SyncOne.
- Explain how they support customer acquisition, retention, and differentiation.

3. Go-to-Market Strategy

- What sales and distribution approach should InnoSync adopt?
- What pricing model should be used for different segments?

4. Organisational Readiness

- What internal capabilities and talent gaps must be addressed?
- What operating model will support fast innovation and high-quality customer support?

Deliverable

Prepare a **maximum 5-slide presentation** summarising your recommendations, rationale, and expected impact.
